SimpleSet + Jane

Exercise programs that land right in the Jane chart

Build your programs in SimpleSet the way you always do, then send them back to Jane in one click.
No double entry, no downloading, no re-uploading.

1

IN JANE

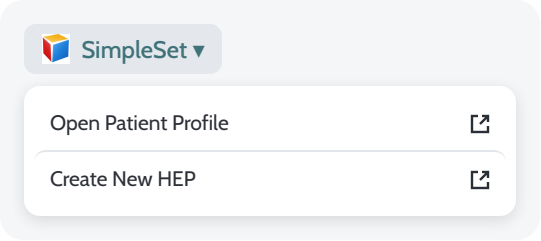
Open the client in SimpleSet

On the patient's profile in Jane, open the **SimpleSet** menu and pick the option that fits:

Open Patient Profile to review their history or edit an existing program.

Create New HEP to start a new program, either blank or from a template.

Either way, the client's contact details come over from Jane automatically, so there's **no double entry**.

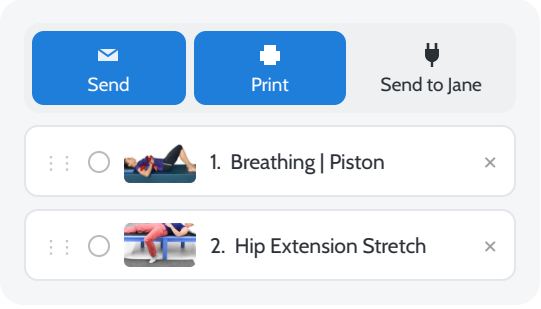


2

IN SIMPLESET

Build the program as usual

Create the exercise program just like you normally would, then **Send** (email) or **Print** it for your client.



3

IN SIMPLESET

Click "Send to Jane"

The program PDF and a text summary are **saved to the client's chart in Jane** automatically.
