Deposit Review Platform

QSI'S USER-FRIENDLY CHECK REVIEW SOLUTION

Is your current check image capture and review solution antiquated and expensive?

QSI developers have created a Check Review Solution integrated with NCR Transaction Gateway. This flexible, user-friendly, and customizable experience allows tellers or the accounting team to review checks and make corrections before the file is sent to your core processor.

- *Login to QSI to review checks and then the approved file is sent to core processor from the QSI application.*
- *View check front and rear to validate signature and endorsement and approve or reject a check.*
- *Edit MICR or amount information, etc. in real-time, with trackable audit of all changes that are made.*
- *Filter and view all checks given certain criteria (i.e. within date range, check amount, etc.).*
- *Export to CSV file.*
- *Integrated to AFS (Advanced Fraud Solutions) as an option as well to allow for a proven check fraud solution.*
- *All image deposits may be processed through this software from multiple platforms, including mobile, branch, ATM and ITM.*
- *AFS TrueChecks Integration available!!*

"This is intuitive. I don't have to worry about going through hours of training for users because it's obvious how this works."
