

Jack Henry AlertCenter™ and TrueChecks®

The Power of TrueChecks in AlertCenter

Catch counterfeit and duplicate checks in real-time
—at the teller line, **before funds are released.**

AlertCenter Integrated

Fraud alerts flow directly into Jack Henry's workflow, keeping all efforts in one screen.

Omnichannel Defense

Block duplicates, counterfeits, and closed-account items at the point of presentment—across branch, ATM, and remote channels.

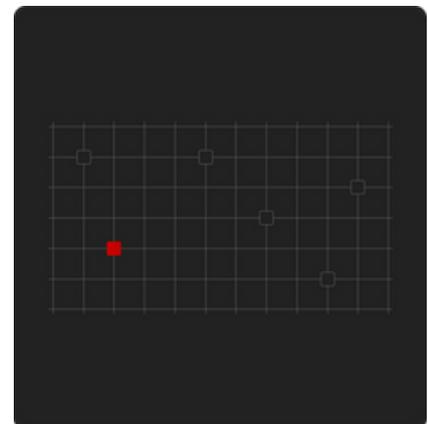

Real-Time Validation

AlertCenter integrates with TrueChecks to deliver real-time fraud notifications directly within the teller's native workflow.

How it Works

- A check is scanned at the branch, ATM, ITM or mRDC.
- AlertCenter automatically routes the transaction data to TrueChecks.
- TrueChecks compares the check data against a national network of >6 million counterfeit, duplicate, closed, and high-risk accounts.
- AlertCenter delivers natively into the teller system, providing:
 - A fraud Score or "safe/alert" recommendation.
 - Guidance for decisions like place hold, reject item.

Jack Henry AlertCenter™ and TrueChecks

LEARN MORE

Key Benefits: TrueChecks in AlertCenter

- **No Disruption to Workflow**
No separate system to log into. TrueChecks results are displayed inside the existing AlertCenter/teller workflow.
- **Omnichannel Fraud Prevention**
Real-time protection across branch, teller, ATM, ITM, and mobile deposit (mRDC).
- **Reg CC Support**
Helps institutions comply with Regulation CC by automating or informing hold decisions.

- **Systems Compatibility & Requirements**

Supported Core Systems	Integrated Teller Systems	Required Imaging Solutions
