

Using Precision Biology to treat and manage

Obesity, Diabetes, Digestive Health, and 400 other **controllable conditions**

Food Related Illness Care Has Failed

Legacy digital programs have not moved the needle because they **ignore the biology**

"Genetics and Gut Microbiome play a very strong role in the development of Obesity and Type 2 Diabetes"

Leaving solutions to provide standardized care driven by unsustainable behavior change

McKinsey & Company

"20 percent of people sustain standardized diets for 6 months"

Leading to silo'd care & multiple point solutions and a limited impact on cost reduction

".....Based on the scientific evidence, digital tools launched more than a decade ago have fallen short, and it is time to move toward the next generation of innovation..."

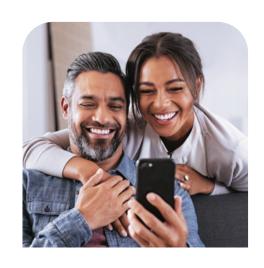

Digbi treats the Biology

100+ published papers, 85 granted US patents.

Genetic, Gut-Microbiome, and CGM Testing

Data driven approach to identify the best route of care

Personalized clinical & lifestyle care across conditions

Onboarding Process

Step 1

Claims Analysis

Step 2

Enrollment

Step 3

Join Program

Step 4

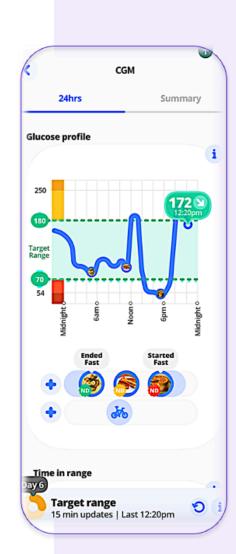

Meet their Care Team

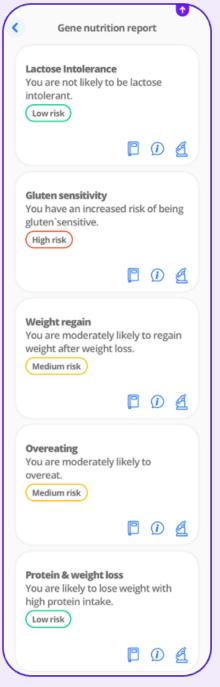

Identify Population	Polychronic high and large cost claimants
Eligibility Quiz	BMI 25-30 + Comorbidity BMI 30+ Type 2 Diabetic GI Condition
Download the App	At-Home Testing Kits will be shipped out Genetic, Gut Microbiome, CGM
Connect with Coach	MDs, Dietitians, Health Coaches Review Testing Results Build Custom Care Plan

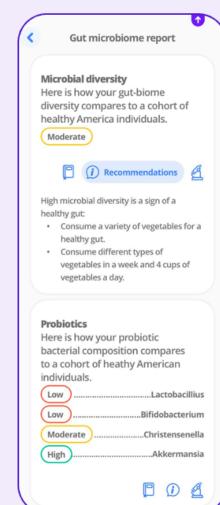

Result and Direction

- Access personalized biology and health reports
- Coaching to drive care process
- Al driven Meal and lifestyle recommendations based on your biology and food access
- Digital Care Journal
- Self-help content and resources

- Why you Struggle?
- Best Route of Care

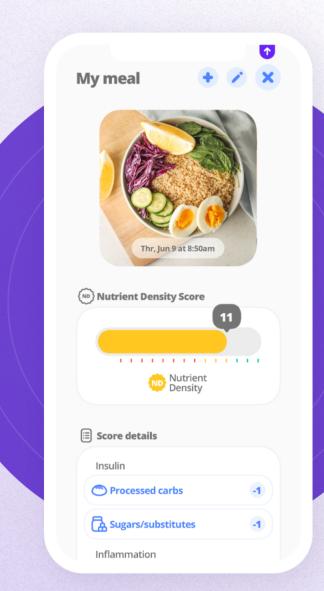

Sustainable Lifestyle Change

Mapping members meals to their biology for precise impactful changes

Looking At:

- ► Inflammation Responses
- ► Insulin Response
- Gut Microbiome Response
- Genetic Response

Truly personalized health intelligence

COACHING

Unlimited Access to Coaching Calls, Group Coaching, Async Materials

MEAL PLANNER

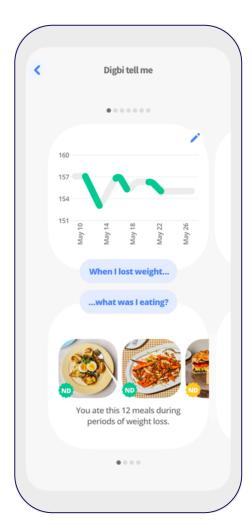

20,000+ rated ingredients and 5,000+ recipes personalized to your biology

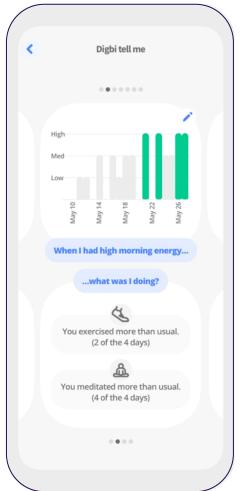

PHARMACOGENIC SUPPORT

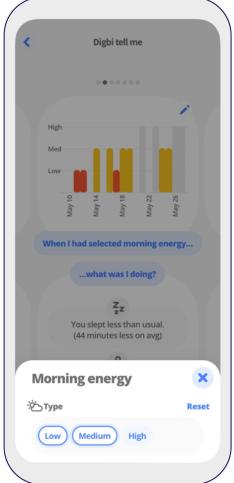

A custom treatment plan utilizing the body's response to medications based on genetics

DIGBI COMMUNITY

Connects members with group coaching calls, recipe books, continued learning, etc

Food As Medicine Outcomes

Digbi AOM Integration Model

	Enters the Digbi Program	All Weight Management Support will run through Digbi Health
T	Prior Authorization	Digbi will set and manage the Prior Authorization of Weight Management Medication
	Provider Prescription	Digbi's clinical consult and prescription services
	Lifestyle Support	Members will enroll in Digbi Lifestyle Support in conjunction with medication
	Fulfillment	Mail Order Medication fulfillment
Ų	Clinical Oversight	Members will engage in on-going clinical consults for medication management

Employer Case Study

North Dakota Public Insurance Trust

Problems

- 1100% Year over Year Increase in GLP-1 Spend
- Low co-pay for GLP-1s & off label prescribing
- Unmotivated rural population that traditional behavior change solutions hadn't worked for
- 63% of their population had obesity related claims
- 91% of their large and high cost claimants were polychronic

Looking For:

- To Control GLP-1 Spend
- Address the underlying root cause of members conditions to reduce future population health risk
- A solution their rural population could engage with

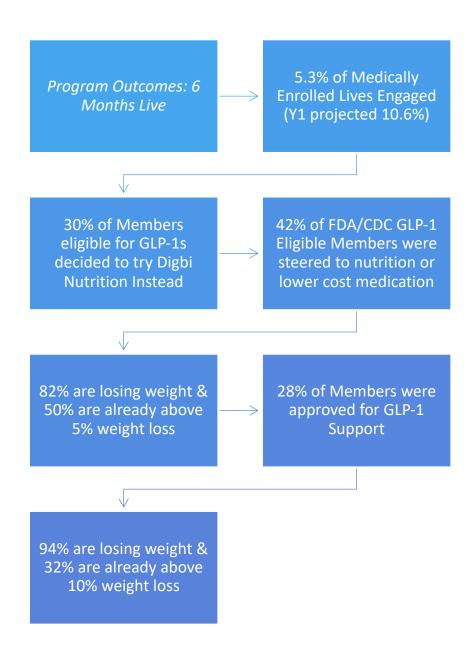

North Dakota Public Insurance Trust

Digbi Solution Design

- Digbi became the prior authorization for all weight management medications
- Members need to engage with Digbi's lifestyle support to get on weight management medications (Non-GLP-1)
- Members who wanted a GLP-1 had to have a BMI 35+ and go through the Digbi Compass
- Plan Design change to 30% co-pay for GLP-1 medications
- Compounded GLP-1 offering at zero dollar co-pay

NDPHIT Case Study
