Scaling Retail Training to Drive 25% Store Sales Growth Year-over-Year

Developed by: Jeremy & The Learning Team

Headline: The training and development team should implement the Learnit platform by Q2 2024. This will result in more consistent, engaging learning experiences across all stores, while avoiding the $XXXK per year in rework created by inconsistent training delivery.

The Problem Statement

Despite trying a train-the-trainer model, our team still can't ensure consistent training delivery across 1,500 stores because each manager customizes content based on their own biases and priorities, which has cost us $XXXK per year in rework.

- High variability in training delivery and engagement across 1,500 stores

- $XXXK spent annually on retraining employees due to inconsistent messaging

- 50% of employees reported receiving the latest training content
